The data used is NOT representation of original data, adjusted for educational purposes and does not reflect the actual business condition of the company.

BUSINESS BACKGROUND

BUSINESS CONTEXT

OCA Indonesia provides OCA Blast, an enterprise messaging platform that enables businesses to communicate with customers through WhatsApp, E-mail, SMS, and Call.

The platform supports high-volume enterprise messaging across multiple industries and use cases, including customer notifications and campaign communication.

BUSINESS PROBLEM

Current Challenge

- Each communication channel is monitored **separately**
- No unified view of cross-channel performance
- Difficult to analyze:
 - Overall effectiveness
 - User engagement behavior
 - Traffic patterns across time

Impact

- Fragmented insights
- Slower and less informed decision-making

Need

A centralized, always-updated dashboard to support operational and business decisions.

Root Cause Analysis

01 Communication channels are monitored in silos

02 Cross-channel user behavior is not visible holistically

03 No centralized, always-updated dashboard exists

04 Fragmented insights limit operational and business decision-making

DATASET SCOPE

Included

- Transaction-level messaging data
- Channel type
- Message status (clicked, delivered, failed)
- Timestamp (date & hour)
- User and industry information

Not Included

- Message content
- Customer demographic data
- Profit margin

Selected Analytics and Metrics

1. Channel Usage

- **Total Transactions per Channel**
- **Overall Transaction Volume**

Identifies the most-used communication channels datasets

2. Channel Effectiveness

- **Message Status Counts**
- **Highest-performing status per channel**

Evaluates delivery and engagement success

3. Traffic & Timing

- **Traffic by Day of Week**
- **Traffic by Hour**
- **Trend over Time (Daily)**

Reveals peak usage periods and behavioral patterns

4. User Engagement

- **Top users by transaction volume**
- **Active usage frequency (daily activity)**

Distinguishes high-volume vs consistently active users

5. Analytical Design

- **Parameter-driven channel selection**
- **Dynamic time granularity (day / hour)**

Ensures accurate analysis across separate channel

METHODOLOGY

Analytical Steps:

1. Data cleaning & validation
2. Metric definition & aggregation
3. Channel & time-based analysis
4. User-level segmentation
5. Dashboard development in Tableau
6. Insight generation & recommendations

Channel Effectivity

KEY INSIGHTS AND

S

Insights

- **High messaging volume, uneven effectiveness**
Total transactions are high, but a large share of messages fail, limiting overall effectiveness.
- **Channel usage is concentrated**
WhatsApp and E-mail dominate total volume, meaning overall performance is highly dependent on these two channels.
- **Activity trend is declining over time**
Message volume shows a clear downward pattern across the observed period.
- **Engagement varies by time**
Traffic is higher on weekdays and during business hours, indicating time-dependent usage behavior.
- **Usage is driven by a small group of users**
A limited number of enterprise users contribute a disproportionately large share of total activity.

Recommendations

- Prioritize **channel-level effectiveness**, not just volume, when evaluating performance.
- Focus operational improvements on **WhatsApp and E-mail**, as they drive most activity.
- Monitor declining trends as an **early risk signal** for engagement or usage drop-off.
- Align operational decisions with **weekday (mostly on Wednesday and Thursday), business-hour usage patterns**.
- Implement closer monitoring and support for **high-volume enterprise users**.

Insights

- **WhatsApp is the strongest engagement channel**
Highest volume with the largest share of “read” messages and consistent success during weekdays.
- **E-mail shows high volume but low effectiveness**
Failed messages dominate, making it the largest contributor to delivery inefficiency.
- **SMS is highly reliable but low-engagement**
Nearly all messages are successfully sent, but engagement depth cannot be measured.
- **Call is low-yield and timing-sensitive**
Most calls are unanswered, with limited success concentrated at specific times.
- **Successful marketing engagement is time-dependent**
Across channels, higher success appears during weekday working hours.
- **Travel is the dominant business field across all channels**
The Business Field distribution shows Travel as the largest contributor to total messaging activity, indicating strong platform adoption in this industry.

Recommendations

- Use **WhatsApp** as the **primary marketing engagement channel**.
- Reduce reliance on **E-mail for time-sensitive campaigns**; reserve it for informational messaging.
- Leverage **SMS as a supporting channel** for alerts, confirmations, or reliability needs.
- Restrict **Call usage** to escalation or high-priority follow-ups only.
- Schedule marketing campaigns during **weekday business hours** (preferably on Wednesday and Thursday) to maximize success.
- Provide closer support and retention focus for **top Travel enterprise users**. Also, promote to more Travel companies
